KinShield demo documents

Four invented documents for Ramesh, 74, the synthetic demo patient. Upload them in order in **Documents** after clicking **Start the demo**. Each one shows different features.

Order	Upload this	What it shows
1	**1-discharge-summary.pdf** (or use Documents → Read the PDF)	Reading and redaction; every field linked to its line on the page; confirming name, strength and dose. Then Decisions: 3 new medicines, 2 dose changes, Ibuprofen explicitly stopped, and Metformin **not mentioned** (stays until you decide). Medicines: the Clopidogrel label mentions Omeprazole.
2	**2-follow-up-prescription.pdf**	A later visit. Metoprolol dose increased (changed). Omeprazole explicitly stopped and Pantoprazole started (new). Metformin now explicitly continued. The new Pantoprazole gets its own label check against the rest of the list.
3	**3-clinic-prescription-photo.jpg** (or take a photo of it with Take a photo)	The phone-photo path: no text layer, so the page is read with local OCR. Paracetamol is as-needed (no reminder times); Ambroxol syrup for 5 days. Medicines sold mainly outside the US may show "No label information available": the app says so instead of implying they are safe.
4	**1-discharge-summary-photo.jpg**	Optional: the same discharge as a tilted, noisy photo, to compare OCR with the PDF text.

Then try

• **Medicines** → **Make a reminder due now**, then **More** → **Parent's screen**: tap **I need help**, or leave it for 2 minutes. A Telegram alert is sent; it shows as seen only after **Seen** is tapped.

• **Today** → **Note a symptom**, e.g. "dizzy after morning tablets". It goes into memory and the brief.

• **More** → **Ask KinShield**: "What changed in the plan this week?" Every sentence cites its record.

• **More** → **Visit brief** → **Prepare the brief**, then open the PDF to take to the doctor.

• **More** → **Activity log** → **What was sent**: the exact redacted text each Nemotron model received.

Notes

Names, phone numbers and ID numbers on these documents are there on purpose, so you can see them removed before anything is sent to a model.

KinShield organises what documents say. It does not give medical advice or judge whether medicines are safe. Synthetic document for the KinShield demo. All names, numbers and details are invented.
